Albert Einstein, a physicist, was born on March 14, 1879, in Germany. He could change people's understanding of the physical world, therefore, he has been considered as one of the greatest thinkers in science. After graduating in 1900, Einstein had a hard time finding a job. He finally got a job at the Swiss Patent in 1902. This job gave him the time to do some of his important works like writing theoretic papers on physics, especially his Theory of Relativity. He became a professor at the German University in Prague. He began working at the Prussian Academy of Sciences in Berlin in 1914, and soon finished his work on his General Theory of Relativity, which was published in 1916. Einstein was awarded the Nobel Prize for physics in 1921. In 1933, he left Germany because of the strict rules of Hitler. He went to work at the Institute of Advanced Study at Princeton University in New Jersey. He later became a U.S citizen. During World War II, he wrote a letter to President Roosevelt expressing his worry about the atomic bomb.

After stopping his work in the institute in 1945, he spent much of his time giving lectures and speeches and working on theories. In his final years, he lost his health. He was hospitalized with stomach pains several times, and he died on April 18, 1955.

Artificial Intelligence, or AI is the ability of a computer or a robot to do activities that usually need human intelligence. These tasks and activities include understanding languages, recognizing pictures, solving problems, and learning from experience. AI is used in many parts of our lives today, like virtual assistance, self-driving cars, and suggestion systems on websites. AI helps doctors cure diseases and suggests good medicines in healthcare. AI is also changing education in many ways. Many schools and universities use AI tools to help students learn better. These tools can check how well students are doing, show what they need to work on, and give lessons that meet their needs. AI can give quick feedback on homework and tests, helping students learn faster. Teachers can also use AI to save time on grading and making lesson plans.

AI has many good uses; however, some people worry about its bad effects. They think AI might take away jobs. Others are also worried that AI might make mistakes. Despite these worries, many specialists believe that if AI is used carefully and with good rules, it can help society a lot. So, people, companies, and governments need to work together to use AI in a good and fair way.
